Summary

Data and operations analyst pairing a law degree with over 15 years' experience running processes in law firms and an ecommerce business, plus full-time data analytics training. I find the steps and costs that should not exist and remove them: a forecasting database that replaced a paid subscription, an automation that cut a 5+ person monthly process by 90%, and an AI-agent workflow that keeps a competitor analysis up to date.

Experience

Data Analyst Intern **05.2026 - 07.2026**
Researchpreneurs (Masterschool internship placement) Germany (Remote)

- I was brought in to collect new data, but noticed my team's existing data was inconsistent across file formats and was never going to answer their questions. So I built Python pipelines to scrape, clean and structure all of it, tested end to end, into a single SQL database where questions could be answered with a query.
- Past competitor analyses had no structure I could replicate, so I defined the evaluation framework and the metrics every competitor would be scored on, then packaged it as a Claude Code skill and ran agents to apply the same criteria to every site. Any analyst after me can rerun it for an updated and unbiased report.

Relocation & Data Analytics Retraining **02.2019 - 04.2026**
Career break, self-directed Germany

- We moved to Germany in 2018, and my remote contracting wrapped up soon after. I learned German at the local VHS (B1 integration course, 2023), then retrained in data analytics, including 30+ DataCamp courses and full-time Masterschool training from April 2025.

Operations and Data Specialist **11.2015 - 01.2019**
Freelance South Africa & Germany (Remote)

- **BigSpool Inc.:** To determine if the inventory forecasting report they bought monthly was any good, I built my own database and report to understand how it should work to make an informed call. Mine replaced the subscription completely, and I used it to manage $250K of inventory across 7 marketplaces and 5 brands.
- **Tilburg University:** Finance professors needed 300-year-old handwritten stock ledgers turned into data for research into the 1720 South Sea Bubble. Over 2 years I analysed ~18K photographs: delivering a standardised database of ~46K East India Company transactions with ~5K unique traders identified, then overhauling their Bank of England dataset with 20K+ transfer records and 11K+ unique traders identified.

Commercial Secretary, then Services Assistant **07.2012 - 09.2015**
ENSafrica (Africa's largest law firm) Johannesburg & Cape Town, South Africa

- A manual monthly expense allocation tied up 5+ team members for days, so I worked out the patterns they were searching for and automated the process: exporting the expense billings from Elite 3E to Excel, filtering them and bulk-allocating the list back in Elite. The workload dropped 90% and accuracy improved.
- Access cards were going missing across 6 offices and nobody knew how many should be in inventory, so I built a database tracking ownership and loss patterns. Now we had a full accounting and could identify repeat offenders.

- Contract-style due-diligence reports were not bringing in business, so I redesigned them into a visually appealing product for clients and coordinated the practice groups' contributions. The new format went into the pitch that won the mandate to revise a mining conglomerate's entire contract suite in line with the new Companies Act.

Elite 3E | Excel

Legal Secretary & Research Coordinator **09.2001 - 06.2012**

Various South African law firms & University of Pretoria Gauteng, South Africa

- A senior advocate working on commission went into contract negotiations blind, so I tracked his time, calculated his commissions and reported per-client fees and rate trends. He walked into negotiations informed, and correcting past calculation mistakes put money straight back in his pocket.
- I was handed a debt-collections department that hadn't been profitable in years, where interest ran on the *in duplum* rule: interest and costs may never exceed the outstanding capital. I studied the rule, built a spreadsheet that calculated it correctly, and defended my interpretation against senior attorneys, recovering money for clients and preventing endless debt for debtors. The department turned a profit within 6 months, and years later a court ruling confirmed my interpretation, with the rule itself codified into law.

Projects

Analog Heroes FBA Analytics (synthetic data) **07.2026**

Live Dashboard · GitHub

- Which products actually earn their FBA fees? To answer it, I invented an Amazon seller: generated the data in Python, modelled it into a SQL star schema backed by 39 automated tests, and built a Power BI dashboard that answers the question per SKU, with revenue reconciling from source to dashboard. Shipped in 11 days working AI-native with Claude Code.

Education

Data Analytics (Advanced Data Science and AI) **04.2025 - 07.2026**

Masterschool Full-Time Training

- 15 months full-time across the analytics stack: SQL (PostgreSQL, BigQuery), Python, Tableau, EDA, statistics, machine learning, NLP, time series forecasting and workflow automation (n8n), all on real-world datasets.

Bachelor of Laws (LLB) (Commercial Law) **01.2002 - 11.2011**

University of South Africa (part-time, distance learning) Bachelor's Degree

Certifications

telc Deutsch B1 (2023) · Salesforce Certified Platform Foundations (2024) · Google Data Analytics Professional (2024)

Skills

Data & Programming: SQL (PostgreSQL, BigQuery, DuckDB) · Python (Pandas, NumPy, scikit-learn, pytest) · Microsoft Access · ETL · EDA · Data Cleaning · Data Validation · Data Reconciliation

BI & Analytics: Power BI · Tableau · Excel · Google Sheets · Statistical Analysis · Reporting · Dashboarding · Forecasting

Tools & Platforms: Git · GitHub · VS Code · n8n · Claude Code · Elite 3E · Salesforce · Amazon Seller Central

Productivity & Collaboration: Microsoft Office · Google Workspace · Slack · Trello · Miro · Airtable · Notion

Languages

English (C2) · German (B1/B2) · Afrikaans (Native)
